Instructions:

Surveyor allows you to capture, consolidate and roll up the energy consumption and cost savings data for each group on your network. An analysis of the cost savings can tell you how effective *Surveyor* is on your network and when your return on investment will be realized.

The roll-up data is gathered from each *Surveyor* client. It is important that you **DO NOT** remove or modify any of the details on the Rollup Data sheet.

Use the options below to modify your report variables, such as baseline date range and actual energy cost per kilowatt-hour.

Assumed Average Client Consumption: On 80 Suspend 12 Off 0 1403
(enter Watts used by average client (CPU + Monitor) for each state) 1407
Assumed Average Electricity Rate (\$/KWHr): 0.07 1405
Baseline Period Startdate: 1/1/2002 Enddate: 1/28/2002 1409
